ASSOCIATE PRODUCT MANAGER | PRODUCT & PAYMENTS SPECIALIST

Product-focused engineer transitioning into Product Management with **2+ years of experience building and improving global core banking products GPP-SP (ISO 20022, SWIFT, CBPR+)** across Singapore, Switzerland, and EU markets. Brings strong expertise in **requirements analysis, workflow design, problem-solving, experimentation, system thinking, user research, and cross-functional execution**. Known for translating ambiguous requirements into clear actionable product flows, defining success metrics, improving user journeys, and collaborating closely with engineering to deliver high-quality features.

Certified in **AI-First Product Management (Airtibe)** with additional experience in system design, recommender systems, customer insights, and growth strategy.

PRODUCT EXPERIENCE

Finastra — Software Engineer

Aug 2025 – Present

Product-Led Impact

- Modernized legacy payment components by driving end-to-end migration from **Java 1.8 → Java 21**, improving platform performance and reducing technical debt by **20%**, directly enabling faster feature iteration cycles.
- Built an **AI-assisted migration utility** that automated Markdown-based test case conversions, increasing internal team productivity by **~95%** and reducing manual effort for QA/Product teams.

Finastra — Associate QA Engineer (Product-Focused Work) Aug 2023 – Aug 2025

Product Strategy & Requirements

- Worked closely with product owners & business analysts to define acceptance criteria, refine user stories, and ensure readiness of **20+ Change Requests (CRs)** impacting global payment frameworks.
- Analyzed customer behavior across **MT/MX, SEPA, NZRTGS, HV/LV** flows to identify friction points and propose improvements that reduced user-reported issues by **~25%**.

User Journey & Feature Execution

- Supported CBPR+ 2025 initiative by mapping structured/unstructured/hybrid payment user journeys and validating end-to-end flows for global banks.
- Built detailed process maps for payment orchestration, uncovering hidden dependencies that shaped CR feasibility decisions.

Experimentation & Efficiency

- Automated repeated payment validation flows, reducing regression cycle time by **30–40%**, accelerating CR shipment velocity.
- Maintained compatibility across product versions (4.6 → 4.8), providing insights that reduced integration inconsistencies.

PRODUCT CASE STUDIES & PROJECTS

1. Meesho – Product Thinking (AARRR + HEART Frameworks)

- Synthesized customer research from Google, Reddit, X, and app reviews to identify **top 5 friction areas** across discovery, reliability, and post-purchase loops.
- Proposed measurable solutions tied to AARRR funnels & HEART metrics, enabling **north-star alignment** between user experience and revenue impact.

2. Snabbt – Retention Strategy (0 → 1 PM Work)

- Analyzed 30+ user interviews to identify trust gaps & service quality issues.
- Designed **Snab Coins, Weekly Streaks, and Cleaner Profiles**, projected to increase weekly retention by **15–20%**.
- Created user journeys, wireframes, and success metrics.

3. Spotify – Premium Conversion Strategy

- Audited full conversion funnel → identified “content sampling” and “playlist lock-in” as activation levers.
- Designed activation experiments using RICE scoring; proposed content-loop mechanism increasing potential trial-to-premium lift by **8–12%**.

4. Instagram Threads – Growth Loop Optimization

- Mapped Threads’ viral, content, and notification loops → identified gaps in content density & multi-session stickiness.
- Proposed 5 experiments with success metrics projected to increase engagement by **8–12%**.

5. NoBroker – Services Discovery & GTM

- Conducted market analysis for Tier-1 societies → identified top service gaps and designed GTM & pricing frameworks.
- Delivered value prop, user journeys, and retention recommendations.

6. Jar App – UX Redesign & Launch Strategy

- Redesigned onboarding journey to reduce cognitive load and improve activation.
- Created Figma screens + launch kit for new Jar Circle feature.

7. System Design — AI-Driven Learning Recommendation System

- Built modular system achieving **<200ms response time** and **99.9% uptime** using hybrid recommendation logic.
- Prioritized features such as personalized feeds, dashboards, nudges, instructor analytics, and A/B testing tools.

SKILLS

Product Skills: PRD Writing • Requirement Breakdown • User Research • User Journey Mapping • Metrics & KPIs • Wireframing • Figma • A/B Testing • Prioritization (RICE, MoSCoW) • Problem Solving • Sprint Planning • Stakeholder Management • Competitive Analysis

Domain Skills: Payments (SWIFT MT/MX, ISO 20022, CBPR+, SEPA, NZRTGS, HV/LV) • GPP-SP (4.6–4.8) • Digital Banking • Transaction Flows • CR Management • Payment Orchestration

Technical Skills: Java • SQL • Git • Jenkins • API Testing • Test Automation Frameworks • CI/CD • Azure DevOps • Selenium • Cucumber

Soft Skills: Storytelling • Prioritization • Ownership • User Empathy • Communication • Critical Thinking • Cross-functional Collaboration

EDUCATION

AI-First Product Management — Airtribe (2025)

MS (Certification) – Data Science — IIIT Bengaluru (2022–2023)

B.E. — Electronics & Communication Engineering — Sait(VTU) (2017–2021)

CERTIFICATIONS

- 7-Day Product Breakdown Challenge
- DS ACP C44 — Business Analytics (IIIT-B)
- SQL (HackerRank)
- Embedded System Design — NPTEL
- Texas Instruments Analog Systems

AWARDS & ACHIEVEMENTS

- Recognized twice at ***Finastra*** for outstanding product-effectiveness & process improvements
- Top 20 finalist (Karnataka) – **National IESE Makeathon**
- Published: *Android Controlled Hovercraft for Space Mission (IJSREM)*
