

SHIVAM GOYAL

SDET | QA Automation Engineer | Fintech & Global Payments

+91 8433191219 | shivamgoyal452@gmail.com | linkedin.com/in/shivamgoyal452 | shivamgoyal.netlify.app

PROFESSIONAL SUMMARY

Results-driven SDET and QA Automation Engineer with 3+ years of experience designing and owning scalable test automation frameworks for global financial payment systems. Deep expertise across SWIFT MT/MX messaging, ISO 20022 (pacs, pain, camt), SEPA, CBPR+, High Value and Mass Value payments — validated across enterprise banking clients and clearing networks in highly regulated environments. Proven track record of reducing manual testing effort by up to 95% and automating 500+ test cases. Experienced in Agile/Scrum delivery, CI/CD pipeline engineering, REST & SOAP API testing, microservices validation, and AI-powered internal tooling. A problem solver who thrives under pressure and takes full end-to-end ownership of quality.

KEY ACHIEVEMENTS

- ▶ Automated 500+ test cases across SWIFT MT/MX, SEPA, CBPR+, NZRTGS, HV/LV and ISO 20022 payment flows — reducing manual testing effort by 80–95%
- ▶ Held sole end-to-end automation ownership for Swedbank — full framework design, test strategy, codebase maintenance and regression across GPP-SP v4.6–4.8
- ▶ Built JAZ — an AI-powered internal CI/CD observability tool for real-time Jenkins & Azure DevOps pipeline health monitoring, adopted by DevOps and infrastructure teams
- ▶ Led JDK 1.8 → JDK 21 enterprise migration for payment automation suite — zero regression failures, improved performance and modern language adoption
- ▶ Designed AI-powered Markdown migration utility that eliminated manual test case conversion effort — boosting QA team productivity by ~95%
- ▶ Recognised multiple times at Finastra for outstanding product effectiveness and process improvement contributions

PROFESSIONAL EXPERIENCE

Finastra · Software Engineer – SDET (Automation & Payment QA)

Aug 2025 – Present

- ▶ **JDK Migration:** Executed end-to-end migration of enterprise automation suite from Java JDK 1.8 to JDK 21 — ensuring compatibility, adopting modern language features, and achieving zero regression failures across SWIFT MT/MX and ISO 20022 payment test suites
- ▶ **AI Migration Utility:** Designed and built an AI-powered Markdown-based migration utility enabling QA teams to convert legacy test cases to new architecture without manual effort — reducing migration time and boosting productivity by ~95%
- ▶ **CI/CD Engineering:** Engineered and maintained scalable CI/CD pipelines using YAML to automate end-to-end test execution across REST API and Web layers — fully integrated within Agile sprint delivery cycles using Jenkins and Azure DevOps
- ▶ **JAZ Tool:** Built JAZ CI Automation Tool — a desktop observability solution providing real-time pipeline health monitoring across Jenkins and Azure DevOps, leveraging GitHub Copilot and Claude AI — adopted by infrastructure and DevOps teams
- ▶ **Stakeholder Support:** Performed root cause analysis (RCA) on critical production issues raised by banking stakeholders — improving incident resolution speed and cross-functional transparency

Finastra · Associate QA Engineer

Aug 2023 – Aug 2025

- ▶ **Swedbank – Full Ownership:** Held sole end-to-end automation ownership for Swedbank — covering FFF framework design, test strategy, test case authoring, PKG issue resolution, codebase maintenance, and large-scale regression testing across GPP-SP product versions 4.6, 4.7, and 4.8
- ▶ **Payment Types – MT & MX:** Delivered end-to-end manual and automated testing for SWIFT MT Messages and MX Messages — including High Value (HV) and Mass Value/Low Value (LV) payment flows across multiple banking clients and clearing networks
- ▶ **Pain.013 & Caller Pay:** Executed full test coverage for Pain.013 Drawdown Request flows — both customer-initiated and bank-initiated — including Caller Pay scenarios, validating end-to-end payment orchestration and business rule compliance
- ▶ **ISO 20022 Message Validation:** Performed structured message-level validation across pacs (payment clearing & settlement), pain (payment initiation), and camt (cash management) message types — ensuring schema compliance, field mapping accuracy, and end-to-end flow integrity
- ▶ **CBPR+ 2025 Hybrid:** Delivered end-to-end automation and compliance testing for CBPR+ 2025 Hybrid release — covering Structured, Unstructured, and Hybrid payment formats including gateway testing on both Gateway and GPP-SP sides
- ▶ **Clearing Networks:** Executed full clearing system validation for SEPA, NZRTGS, GFIT, and TARGET2 — including gateway testing, payment routing validation, and compliance with network-specific message standards and settlement rules
- ▶ **UniCredit & OCBC:** Provided automation support for UniCredit and OCBC — creating test cases, resolving PKG issues, and maintaining regression suites within cross-functional Agile teams of 8–15 engineers across Dev and QA
- ▶ **Test Strategy & Compliance:** Translated business requirements and user stories into robust automated test scripts aligned with Change Request (CR) thresholds — ensuring regulatory compliance, defect management, and payment flow integrity across all supported payment types

uTest · Software QA Tester

Apr 2022 – Mar 2025

- ▶ Performed structured and exploratory testing across web, mobile, and desktop platforms for global client products across multiple browsers and operating environments
- ▶ Identified and reported high-value defects with strong acceptance rates — consistently meeting client SLAs and delivering across concurrent test cycles

SiliconIndia US · Technical Process Executive

Sep 2021 – Feb 2022

- ▶ Handled client coordination, business analysis, onboarding workflows, and technical research — building core stakeholder management, communication, and problem-solving skills

TECHNICAL SKILLS

Languages	Core Java · SQL
Automation	Selenium · BDD · Cucumber · TDD · TestNG · JUnit · Keyword-Driven · Page Object Model · FFF Automation Framework
API Testing	REST API Testing · SOAP Services · API Validation · Microservices Testing · Postman
CI/CD & DevOps	Jenkins · Azure DevOps · Maven · YAML Pipelines · Git · GitHub · GitHub Copilot · SonarQube · JaCoCo
Payment Types	SWIFT MT Messages · SWIFT MX Messages · High Value (HV) · Mass Value / Low Value (LV) · Pain.013 Drawdown · Caller Pay · SEPA Credit Transfer · CBPR+ · CBPR+ 2025 Hybrid (Structured / Unstructured / Hybrid)
ISO 20022	pacs (payment clearing & settlement) · pain (payment initiation) · camt (cash management) · MT↔MX Migration · Financial Messaging
Clearing / Rails	SEPA · NZRTGS · GFIT · TARGET2 · OCBC · CBPR+ · GPP-SP (v4.6 · 4.7 · 4.8)
Domain	Payment Orchestration · Core Banking · Transaction Flow Validation · CR Management · Risk & Compliance Testing · Defect Management · Test Strategy · Shift-Left Testing

Methodology	Agile · Scrum · Sprint Delivery · Cross-functional Collaboration · Stakeholder Management
AI & Tools	Claude AI · GitHub Copilot · Agentic AI · Prompt Engineering · GenAI · IntelliJ IDEA · VS Code · Jira
Soft Skills	End-to-End Ownership · Leadership · Problem Solving Under Pressure · Critical Thinking · Communication

EDUCATION

Visvesvaraya Technological University (Sambhram Institute of Technology) · **B.E. – Electronics & Communication Engineering** *2017 – 2021*

International Institute of Information Technology, Bangalore (IIIT-B) · **Advanced Certificate in Data Science** *2022 – 2023*

CERTIFICATIONS, AWARDS & PUBLICATIONS

- ▶ AI-First Product Management — Airtribe (2025)
- ▶ DS ACP C44 — Business Analytics, IIIT Bangalore
- ▶ SQL Certification — HackerRank
- ▶ Embedded System Design — NPTEL | Texas Instruments Analogue Systems
- ▶ 7-Day Product Breakdown Challenge — Airtribe
- ▶ Top 20 Finalist (Karnataka) — National IESE Makeathon (All India Competition)
- ▶ Published: Android Controlled Hovercraft for Space Mission — IJSREM
- ▶ Recognised multiple times at Finastra for outstanding product effectiveness & process improvements
